

## Features and Advantages

Dustnet® is a liquid dust suppressant that is truly an evolutionary product on the cutting edge of technology to reduce nuisance and respirable dust.

When used on Silica Sand, Dustnet® reduces up to 97% of nuisance dust during handling and transportation, as much as 74% of respirable free silica and 50% visible dust during blasting.

RCRA approved, Dustnet® is non-hazardous, and it does not produce a hazardous waste in use or manufacturing.

The use of an abrasive treated with Dustnet® does not result in reduction in paint performance, according to tests done by KTA – TATOR of Pittsburgh, PA. Dustnet® has also been tested and approved in treating Frac Sand and Traction Sand.

The use of Dustnet® will return sand blasting to the success once enjoyed by the industrial sand industry and will increase revenue while providing customers with a quality product never before available, and serve in creating a safer work place.

## Ordering Information

Shipping Point:	Bruderheim Plant & Edmonton Distribution Centre
