Aluminum and Stainless Steel Products MSDS Policy

The Canadian Centre for Occupational Health and Safety (CCOHS) states that, manufactured products are one of the items exempt from the WHMIS requirements to provide an MSDS. Items such as steel/aluminum sheets used in the oil/gas pipeline industry do not require an MSDS.

WHMIS classifies a manufactured article as follows:

- It is formed to a specific shape or design during manufacture.
- It's intended use when in that form depends in whole or in part on its shape or design as manufactured.
- Under normal conditions of use it will not release or otherwise cause a person to be exposed to a controlled product.

Section 12 of the HPA **excludes certain product categories** from the federal WHMIS requirement to apply a supplier label and to transmit a MSDS. These categories are: food; drugs; cosmetics; medical devices; pesticides; explosives; radioactive materials (except controlled product carrier materials in radionuclide mixtures); consumer products; wood and products made of wood; tobacco and products made of tobacco; manufactured articles; and hazardous waste.

Ideal Products' aluminum and stainless steel products present no health hazard in their natural state and are considered **manufactured articles** under the law, and therefore does not required products labelling or MSDS.

If you have any question regarding our MSDS policy, please feel free to contact our office at 1-800-299-0819.

Sincerely,

Tammy Bertram
Vice-President
