

4 Easy Steps to Self-Adhering Insul-Hangers

TACTOO® Self Adhering Insul-Hangers were first introduced by AGM Industries in May of 1972. Since that time, they have proven their reliability to the industry, lowered labor costs, and eliminated the use of troublesome adhesive in many applications.

1 - Clean Surface

Make sure the work area is clean, dry, non-porous and free of all oil, film, rust, etc. to assure proper adhesion.

2-Peel Off Backing

Simply remove the release paper from the self-adhering base plate.

3-Press in Place

Stick the hanger on to the properly prepared suitable flat surface, using a firm direct pressure.

Do Not Twist.

4-Install Insulation

No waiting required. Secure insulation immediately after properly applying the hanger. Recommended load per anchor: 3lbs. (1.36 Kgs.)
