

LEED Credits

Roxul insulation is the right choice for creating sustainable buildings and earning valuable LEED credits

Leadership in Energy and Environmental Design or LEED® is a consensus-based system for rating the design, construction, operation, and certification of the world's greenest buildings. Both the [USGBC](#) and the [CaGBC](#) administer the **LEED®** rating system in the pursuit of environmentally **responsible** and more **sustainable** buildings and development.

With LEED®, buildings earn **certification** through accumulating points across **six categories** throughout the construction process. **Roxul** products help builders **earn up to 22 points** towards projects LEED® certification in either **Canada** and the **USA** in the following categories:

Energy & Atmosphere: EA Credit 1

Materials & Resources: MR Credits 2.1, 2.2, 4.1, 4.2, 5.1, 5.2

Indoor Environmental Air Quality: EQ Credits 3.2, 7.1,

Innovation & Design Process: ID Credits 1 to 1.4

Note: Different Roxul products achieve different LEED® points. Earn all you can by consulting Roxul's in-house LEED® advisor at rockford.boyer@roxul.com

Why Roxul Products Take the LEED®

Roxul's innovative insulation offers a world of green features:

Natural, **inorganic** materials with High recycled content *

Naturally **non-combustible** without dangerous chemicals added

Excellent **sound absorption** for occupants' acoustical comfort

Energy saving with higher R-values for consistent thermal performance

Chemically inert to minimize indoor air quality pollutant potential

Resistant to the growth of mold, fungi, and bacteria

Do not rot or sustain vermin

CFC- and **HCFC-free** products and process

Regionally produced and located in close proximity to job sites

* Recycled content can vary based on production. Please contact Roxul Technical Department at 1-800-265-6878
