

Our Responsibility

Our responsibility is to ensure that all of our products at CPD Construction Products are manufactured with the environment in mind. It is our responsibility to ensure that our products biodegrade over time properly. It is for us to make sure that the people who apply our products are not exposed to harmful chemicals or odors. We take the environment into consideration every step of the way in our production and safety measures. For every product we make, there is a product sheet with safety information as well as an MSDS (Material Data and Safety Sheet). All of our products meet, with many exceeding, the requirements of the LEED certification program that is administered by the Canada Green Building Council. Please contact us and we'll be happy to contribute to your LEED certified building project.

Our Promise

In every step of the design and production process, we at CPD Construction Products will take the environment we live in as well as the people that live in it as the main reason for responsible production. As a balanced consensus coalition representing the entire building industry, the Canada Green Building Council promotes the design, construction and operation of buildings that are environmentally responsible, profitable and healthy places to live and work. We at CPD couldn't agree with this mantra more and we promise to design and produce environmentally friendly products and procedures wherever at all possible. Rest assured that when you choose CPD, you are choosing an environmentally responsible business partner.
