**Avanti International**  
**822 Bay Star Blvd.**  
**Webster, TX 77598**  
**800-877-2570**  
**281-486-5600**

**Commitment:**

For over 30 years, Avanti International has been dedicated to helping the environment and "supporting green" not only by supplying the highest quality chemical grouts but by educating contractors, municipalities, and engineers on the most cost-effective techniques used to protect the environment from SSO's & CSO's (sanitary sewer overflows & combined sewer overflows). By focusing on a "greener" environment Avanti stays committed to helping cities all over the world prevent sewage exfiltration and ground water infiltration into the sewer system via mainlines, laterals, and manholes. The resulting soil stabilization and control of groundwater keeps raw sewage from flooding streets, waterways and beaches.

**Collaboration:**

Avanti's technical staff collaborates with chemists, professors and engineers to develop new uses for chemical grouts like hazardous waste encapsulation, erosion control, mine/shaft safety, and the prevention of structural defects due to groundwater. By working closely with the U.S. EPA (Environmental Protection Agency) Avanti has developed safe handling procedures for workers and has taken the initiative to create products that are certified for use with potable water according to the ANSI, NSF 61 criteria.

**Conservation:**

Closer to home, as a company Avanti helps the environment by "supporting green" activities such as energy conservation, the use of skylights, using second-generation water containers, and corporate recycling of papers, plastics, glass, and cardboard.

Please feel free to call with questions or additional ideas about how Avanti and its products can continue to support a healthy, green environment.

Avanti serves more grout professionals  
 than any other company in America.
